Ours: cox1 from PCR (Sanger)

Ours: cox1 from genome assemblies

Public database (NCBI / BOLD)

Branch point supported in ≥ 95% of bootstrap replicates

How to read: each line ending on the right is one DNA sequence.
Sequences joined by short paths are close relatives.
Rooted on 10 other amphipods.

0.05 substitutions per site (≈ 5% DNA difference)

8 × near H. azteca

eastern North America, lab or wild
99.4–99.8 % identical

1 × near H. sp. clade1 JL-2016

laboratory culture used in toxicity tests
99.4 % identical

4 × near H. sp. 1 AGC-2024c

USA, Nevada
97.4–99.0 % identical

2 × near H. azteca

France, Lyon
98.3–99.2 % identical

1 × near H. azteca

eastern North America, lab or wild
99.6 % identical

3 × near H. azteca

Canada, Alberta
98.3–99.1 % identical

3 × near H. nefrens & others

Lake Titicaca, Peru/Bolivia
98.1–99.1 % identical

18 × near H. sp. O VI-2023a & others

Chile, Antofagasta; Argentina, Calalaste ...
97.2–99.4 % identical
